

Santa Fe Trail Ranch Metropolitan Water District

Application for Water Service

The SFTR water system has been functional since October of 2004, and is accepting applications for service. Most of the system is in service with the exception of those laterals which have no meter pits installed. They will be pressurized and verified as needed.

If you are interested in applying for service, please contact the Metro Business Manager at Century Business Solutions in Trinidad: the telephone is 719-846-2080. All of the application documents can be downloaded from this site and printed for submittal.

Once the completed application package is received, the paperwork will be submitted to the City of Trinidad, and installation of the meter pit will be scheduled. The Metro's involvement ends at the outlet side of the meter pit, so you will be required to employ your own contractor to complete the connection.

The Metro strongly recommends plumbing your system to fill your cistern, and pressurizing your home by pumping from your cistern, since the water system was designed to do only that, and pressures are not adequate system wide for direct connection. The system only guarantees adequate pressure at the meter pit to replenish your cistern. There are areas where direct connection is an option, but it is prudent to have a cistern filled with water in case of water system outage.

Should you have questions which the Business Manager is unable to answer, you will be directed to contact the appropriate person on the SFTR Metro District Board.
